## Results of the 2018 Science Survey

Education - Core Content Areas - Accountability Program
The following is a summary of the surveys of local school systems conducted pursuant to House Bill 1227: Education-Core Content Areas-Accountability Program. The information was gathered in the fall of 2018. The 2018 administration of the science survey contained edited questions to better reflect and inform the legislatively mandated areas of focus regarding the progress being made on the implementation of the Next Generation Science Standards (NGSS) within the Local School Systems (LSSs): instructional time for science, availability and use of appropriate instructional materials aligned to the NGSS, instructional technology, and teacher certification.

The number of respondents to the surveys were:

|  | Respondents | LEAs |
| :--- | :---: | :---: |
| Teacher Survey | 2301 | 20 |
| Supervisor Survey | 18 | 16 |

Summary: The 2018 survey indicates lower number of hours spent on content aligned to NGSS in the science classroom per week, resource availability, technology availability and use, and professional development opportunities at the elementary level than at the middle and high school levels. Supervisors reported high levels of NGSS curriculum development and professional development at all grade levels. While the percentages of classes being taught by teachers out of their certification area are generally low, some supervisors reported as many as a third of science classes were taught by teachers not certified in the subject.
