Karen B. Salmon, Ph.D.

TO: Members of the State Board of Education<br>FROM: Karen B. Salmon, Ph.D.<br>DATE: January 25, 2021<br>SUBJECT: Dashboard and First Quarter Performance Metrics<br>Disrupted Instruction: A Path Forward

## PURPOSE:

To review the dashboard and first quarter performance metrics gathered from the Local School Systems and discuss strategies to reduce the impact of disrupted instruction on student learning.

## BACKGROUND/HISTORICAL PERSPECTIVE:

Local school systems across Maryland opened schools for the 2020-2021 school year beginning on August 31, 2020. All of the school systems opened virtually. Since the start of school, 20 of the 24 school systems have opened certain schools for in-person instruction for small groups of students and/or for students in a hybrid model based on their local school system plans. Based on infection rates, many school systems over the first semester have adjusted their plans for in-person instruction.

## EXECUTIVE SUMMARY:

The data provided indicates the circumstance at a point in time, that is, the last day of the first marking period, or information on the first marking period as a whole. Data has been gathered from local school system reports, the Maryland Department of Health, first quarter performance metrics, Maryland State Department of Education (MSDE) Standard Data Collection, and the Technology Survey conducted by the MSDE. Strategies will be shared on how to address and reduce the impact of the disrupted instruction on student learning.

## ACTION:

Information for discussion.

## ATTACHMENTS:

Dashboard and First Quarter Performance Metrics
Disrupted Instruction: A Path Forward PowerPoint

# Dashboard and First Term Performance Metrics Fall 2020 

EDUCATION

Maryland State Board of Education
January 25, 2021

## Dashboard and First Term Performance Metrics: Fall 2020 Topics

1. Student enrollment
2. Student attendance and participation/engagement
3. Learning modes
4. Equity in technology for learning
5. Personal protective equipment in schools

## Dashboard and First Term Performance Metrics: Fall 2020 Data Sources

1. MSDE standard annual data collection: enrollment collection (as of 9/30)
2. First Term Performance Metrics (LSS survey, Fall 2020)
3. MSDE Technology Survey (LSS survey, Fall 2020)
4. MSDE Dashboard data collection (LSS survey, January 2021) for all additional data and updates

All Fall 2020 data presented apply to the first marking period (cumulative data) or the last day of the first marking period (point-in-time data).

## Fall 2020 Enrollment, All Students

Enrollment in Maryland Public Schools

EDUCATION

## Fall 2020 Enrollment, by Race/Ethnicity

Equity and ExCELLENCE

## Fall 2020 Enrollment, by Grade Band

Fall Pre-K and Kindergarten Enrollment

Fall Enrollment by Grade Span

## Fall 2020 Percent Attendance, All Students

Percent Attendance - All Students, All Grades

mapnup suis oferperer of

## Fall 2020 Percent Attendance, by Race/Ethnicity

Percent Attendance - Black Students, All Grades

Percent Attendance - White Students, All Grades

18

Percent Attendance - Hispanic Students, All Grades

## Fall 2020 Percent Attendance, by Service Group

## Fall 2020 Student Contact

Percent of Enrolled Students with No Contact

## Fall 2020 Student Participation in Extracurricular Activities

- 9 systems reported in Fall 2020, all high schools were offering in-person interscholastic competition season and/or practices and conditioning. An additional system was offering return to play activities, but not traditional practices or competition.
- 16 systems reported at least some schools were offering in-person fine arts related, service-oriented, and/or miscellaneous extracurricular activities. School participation ranged from all schools ( 5 systems) to some schools (high schools only, or selected schools only, or centralized programming for students from multiple schools).

Equity avo Excellence

## Fall 2020 Student Learning Modes: Student Participation

Number of In-Person Learning Days Offered to Selected Students

- A reported 55,484 students participated in in-person instruction at some point during the first term of the school year (6.2\% of Fall 2020 enrollment).
- As of the last day of the first marking period, 13 systems were entirely or nearly-entirely virtual ( $80 \%$ or more of students virtual).

## Fall 2020 Student Learning Modes: Student Selection

- Many systems reported prioritizing in-person instruction for student or instructional groups:
- Students with Disabilities (15 LSSs)
- English Learners (7 LSSs)
- CTE student experiences (9 LSSs)
- Pre-K \& Lower Elementary (7 LSSs)
- Students with low/no internet connectivity (5 LSSs)
- Students with low engagement or previous non-engagement (4 LSSs)
- Systems reported using a variety of strategies to determine which students to enroll into in-person instruction after prioritizing student groups:
- Parent surveys were used to assess the scope of interest in in-person instruction (7 LSSs).
- Some systems allowed schools to determine enrollment on a case-by-case basis incorporating factors like a social-emotional need, lack of spring engagement, and fall diagnostics (4 LSSs).

Fall 2020 Teacher Instructional Modes by Location on Last Day of First Term

## Fall 2020 Student Learning Modes: Synchronous Instruction

Average Daily Synchronous Instructional Time,
All Grades

# Statewide average daily synchronous instruction time, all grades: 4.2 hours 

Elementary grades (K-5): 3.9 hours
Middle grades (6-8): 4.3 hours
High grades (9-12): 4.4 hours

## Fall 2020 Equity in Technology for Learning

Estimated Percent of Students with Access to a Device

Estimated Percent of Students with Connectivity to Support Learning

One local school system reported 43\% of students had access to a device.

## Fall 2020 Cleaning in School Buildings

## All local school systems indicated:

- Cleaning supplies are available to keep schools clean;
- Classrooms used for in-person instruction are being cleaned daily.
- Masks are available for teachers and students
- Rubber gloves are available, as needed
- Hand sanitizer is available within the classrooms or within a certain area range

# Disrupted Instruction: A Path Forward 

EQUITY AND EXCELLENCE
State Board of Education
January 25, 2021

EQUITY AND EXCELLENCE

## Rapid Transformation:

## School-based to Home-based Learning

- Lessons were developed and, along with meals, instructional materials were sent home.
- Thousands of electronic devices were purchased and distributed.
- Hot spots were set up.
- Teachers were trained on how to teach virtually.

## Impact on Students

- Significant social and emotional toll on students
- Widespread impact on learning from disrupted instruction
- Students of color continue to be more likely to remain remote and are less likely to have access to the prerequisites of learning - devices, internet access, and live contact with teachers.

## Impact on Learning

- State assessments were cancelled across the nation last year.
- Maryland schools were required to assess the needs of students at the beginning of the school year.
- Northwest Evaluation Association (NWEA) predicted that students lost approximately one-third of a year in reading and a half-year in math; McKinsey predicted that students lost three months to a year of learning depending on the quality of remote instruction.

## Strategies to Address Disrupted Instruction

Establish acceleration plans using evidence-based strategies that support students with:
$>$ More time
$>$ More dedicated attention
$>$ Exposure to grade-level learning

## Expanded Learning Opportunities: Informed by Formative Assessments

Largest learning gains were found when there was a focus on formative assessment.

- Formative assessments are used:
$>$ during instruction to guide or inform instruction, rather than used at the end of a unit; and
$>$ to identify strengths and weaknesses during the learning cycle.
- Formative assessments are immediately actionable.

## Expand Learning Time

- Students will need additional learning hours to make up the loss of learning during disrupted instruction.
- There are a variety of ways to accomplish this:
- Implement summer programs
- Begin the school year earlier and extend it later
- Schedule school year-round
- Extend learning during and after the school day, on Saturdays, or during school breaks
- Design program to include personalized relationships, focused small group instruction, and learning applied to real-world problems and activities
- Reinforce core learning, be culturally relevant, and limit groups to 8-12 students
- Reading scores in Florida increased as a result of an additional hour added to the school day.
- Research showed that struggling students attending summer school after eighth grade decreased their chances of dropping out of high school.
- One option, adopted in some Massachusetts cities, is to turn spring break into a "vacation academy" where struggling students get extra instruction from teachers who opt in and get paid extra. Two studies have found that this worked to boost learning.
- An extended school year could also give students with disabilities more time to make up lost services, and give schools more time to figure out whether their needs have changed.

## Provide High Intensity Structured Tutoring

- Best results are with small groups of one to two students per tutor.
- Research shows students make one to two years of growth a year with intensive, high dosage tutoring.
- Utilize para-educators, college students to deliver service.
- Utilize high quality instructional materials and scaffold instruction and entry skills.

## Establish Acceleration Academies

- A recent RAND analysis of 43 summer programs suggests that 75 percent were effective in improving at least one outcome, especially in reading.
- Acceleration Academies have helped students gain up to three months of learning through 25 hours of targeted instruction in a single subject (math or English-language arts) over week-long vacation breaks.
- Core learning is reinforced and is culturally relevant.
- Acceleration Academies are not run during the regular school day and classes are limited to eight to 12 students.

## Sustain Early Childhood Education Programs

- Research shows that early childhood programs foster substantial gains in school readiness and are a key factor in narrowing the achievement gap even before children enter the PreK-12 system.
- The pandemic has made it difficult for our child care providers to continue providing services. Only 87 percent have been able to stay open.
- Maryland has worked with its child care providers to support them as much as fiscally feasible.
- Strong child care programs enable:
- children to enter school ready for success in Prekindergarten and Kindergarten; and
- working parents to have a safe environment for their child while they are at work.

## Evidence-based Strategies to Address Disrupted Instruction

- Utilize high intensity structured tutoring
- Provide extended day or extended year programs
- Offer summer school program
- Implement Acceleration Academies
- Utilize formative assessments
- Sustain early childhood programs

## Provide Equitable Funding

- The largest cost impact of COVID-19 may be the cost of meeting students' increased academic and social emotional needs.
- Effective recovery and support strategies must address the root causes of educational inequities by reaching large numbers of students and providing more targeted support for the students who are most in need.
- Each of the presented evidence-based strategies will require significant funding. Grants will be made available to school systems and will be monitored for fidelity of program implementation and for efficient use of awarded funds.

## A Path Forward

- To address the widening achievement gap, there must be a focus on the underlying opportunity gaps.
- Our most vulnerable students are in the least desirable learning situations with inadequate tools and support systems
- It is our moral imperative to provide every child with an opportunity to succeed.
